XINFO

Unified IT Information System for complex hybrid data centers

XINFO is a comprehensive analysis tool and hybrid transparency platform for IT operations. It collects, visualizes, and cross-references critical IT data across mainframe and distributed systems.

DATA MANAGEMENT
MAINFRAME MODERNIZATION
AUTOMATION ANALYTICS

KEY BENEFITS

Optimize Data Center Operations

Gain Centralized Transparency

Consolidate IT data from diverse sources into one system for a comprehensive overview of your operations.

Ensure Auditable Compliance

Generate repeatable reports and documentation effortlessly, transforming audit preparation from weeks to hours.

Accelerate Problem Solving

Visualize complex relationships and dependencies to quickly identify root causes and optimize workflows.

Empower All Users

Provide role-specific, self-service data access, reducing reliance on specialized IT knowledge.

PURPOSE-BUILT SOLUTIONS

Achieve Transparency Across Key IT Areas

Workload Automation	Analyze and visualize job dependencies, execution times, and resource usage across all schedulers.
Application Development	Cross-reference program code, JCL, and database access for impact analysis and modernization projects.
Production Planning	Optimize batch processing and resource allocation with clear insights into system performance and data flows.
IT Compliance	Automate documentation and reporting for regulatory requirements like DORA, GDPR, and ISO 27001.
Data Center Documentation	Generate comprehensive, graphical documentation of your IT landscape automatically and consistently.

PRODUCT DATASHEET

KEY PRODUCT FEATURES

Comprehensive Analysis for Hybrid IT Environments

Cross-System Data Analysis
Access and analyze data from JCL, SMF, DB2, IMS, CICS, and various schedulers through a unified interface.

Intuitive Data Visualization
Transform complex data into clear graphical formats, including network diagrams, bar charts, and data flowcharts.

Flexible Query Customization
Create tailored queries without programming knowledge, enabling precise data analysis and personalized insights.

Containerized & Cloud Ready
Simplify installation and management in container environments like Docker, Kubernetes, or OpenShift.

Modern User Interface
Experience a user-friendly, high-performing user interface with REST API integration for enhanced collaboration.

User Management & AD Sync
Comprehensive user management, groups, and automatic role synchronization from Active Directory or OIDC.

Advanced Architecture
Leverages REST APIs, cloud-native capabilities, and containerization for flexible deployment and integration.

MCP Server Integration
Through the new MCP server, you can integrate your information and data directly with LLMs such as Claude, ChatGPT, and more.

CUSTOMER SUCCESS STORY

How SEB Gained Transparency with XINFO

Skandinaviska Enskilda Banken (SEB) leveraged XINFO to centralize and visualize complex Workload Automation data. This provided critical transparency, empowering users with immediate access to essential IT information.

“It is crucial that we can be confident in every impact analysis we perform. And with XINFO, we are.”

Erik Weyler – Mainframe Solution Architect at SEB

100 %

Data transparency for workload automation

300 +

People becoming more efficient on a day-to-day basis with XINFO

500 k+

Data events being scanned on a consistent basis
