PRODUCT EXTENSION DATASHEET

LogZ Explorer (Product Extension)

Direct mainframe log access for Visual Studio Code developers.

LogZ Explorer provides direct, real-time access to mainframe logs stored in LogZ within Visual Studio Code. This integration eliminates context switching and accelerates troubleshooting for developers.

A product add-on to the LogZ solution

LOG MANAGEMENT

KEY BENEFITS

Accelerate Mainframe Log Analysis

Boost Developer Productivity

Enable developers to access mainframe logs directly within VS Code, eliminating workflow disruptions.

Reduce Operational Complexity

Minimize the number of tools and interfaces required for log analysis, simplifying IT operations.

Streamline Troubleshooting

Gain immediate access to archived job logs for faster identification and resolution of issues.

Fast-Track Onboarding

Lower the learning curve for new developers by removing the need for mainframe-specific knowledge.

KEY PRODUCT FEATURES

Directly Accessing Mainframe Logs in VS Code

One Workspace
Access mainframe logs directly within Visual Studio Code, preserving your established development environment.

Seamless Workflows
Develop, test, and analyze logs without context switching, maintaining continuous productivity.

Minimal Setup
Leverage existing MSGCLASS logic for easy implementation without additional configuration.

Flexible Log Access
Short- and long-term availability via SDSF and LogZ.
