Optimize Your Mainframe Access Control with Our z/OS Administration Tool

Get Your Security Up to Speed with Beta Access!

Beta Access for z/OS RACF delivers simple administration, monitoring and auditing of your z/OS security system. Securely operate any number of z/OS systems and RACF databases using the administration, audit, analysis and monitoring tools of the suite.

” We can now easily identify security vulnerabilities in the RACF system and meet compliance regulations. Even users with little technology experience can generate the required audit reports.

Sela Santamaría

Director of IT Systems, Cecabank

The Main Benefits

- Easy Operation
- Real-Time Monitoring
- Transparent Administration
- SMF Analysis for RACF Events
- RACF Help Desk

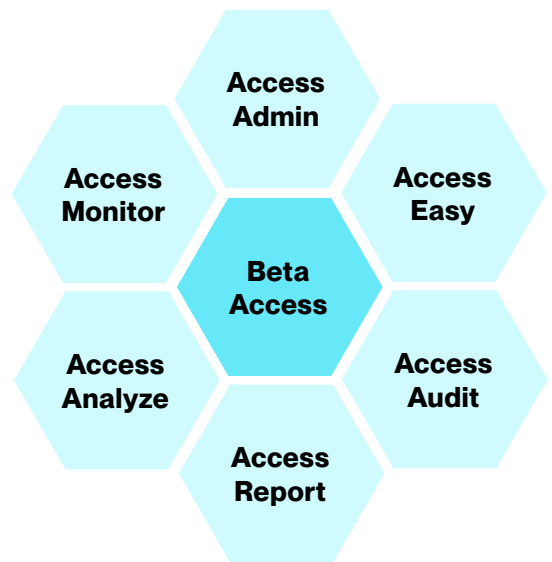

End-to-End Solution for RACF Management!

- **Easy operation**
Access RACF using optimized ISPF panels, web interfaces and convenient Windows-based programs.
- **Transparent Administration von RACF**
Generate automatic RACF commands or bulk user profile updates.
- **RACF help desk**
Ease your central administration burden with Beta Access easy Web Help Desk, an application that allows you to delegate routine tasks to local administrators.
- **RACF auditing**
Provide a comfortable Windows interface for audits that allows operation without specialist RACF knowledge
- **Real-time monitoring:**
Alert the respective users in real time whenever a critical RACF or security-relevant event occurs.
- **SMF Analysis for RACF Events**
Analyze SMF records of the authorization system using predefined reports.

Beta Access Covers all Key Areas of RACF Security Management!

All actions and changes made to RACF databases managed with Beta Access are captured and logged in a dedicated relational database. This ensures that administrators and auditors have access to accurate RACF data at any time – without the need for granting users direct access to RACF. A database generation concept built into the suite means that you can roll back extensive RACF changes and furthermore provides automatic real-time security monitoring!

Designed for high-availability environments, Beta Access delivers functions for the centralized administration of multiple z/OS systems, including Sysplex/Monoplex support. It thus provides you with a single point of control for all corporate RACF systems.

Access Admin the user-friendly ISPF interface delivers functions for the centralized RACF administration.

Access Easy
Free up capacities in your central administration by delegating simple authorization tasks to a help desk or to specially authorized departmental users.

Access Audit allows even non-technical users to check the RACF system and generate audit reports. Thanks to the user-friendly Windows interface, this can be done without direct access to the z/OS system.

Access Report enables you to analyze SMF data as well as RACF and z/OS environment settings, check violations that impact your security and ensure that the configured RACF settings properly protect your system.

Access Analyze
Conveniently analyze your RACF databases using a Windows-based GUI.

Access Monitor the real-time monitoring tool alerts relevant staff to critical RACF events, such as when sensitive data is being accessed or when critical user attributes are being modified.
