DocX

Comprehensive Solution for the Management, Storage and Provision of Document and Print Data

A Solution for High-Volume Documents and Print Data

Beta DocX is a comprehensive software solution for the management, storage and provision of document data, regardless of source, format and volume. Sources from specialized application systems such as SAP can be used and integrated as well as traditional mainframe document formats. With Beta DocX, documents can be archived in a centralized, audit-compliant manner and accessed online at low cost.

” Upgrading our workload solution with a Beta Systems log analysis tool means that we now have a comprehensive query system. It answers questions on quality assurance and makes the flow of process chains traceable.

Karl Paul

Project Manager, Output Services, Allianz

The Main Benefits

- Efficient company-wide document management
- Secure, legally compliant archiving with automatic deletion
- Definition of user authorizations to ensure security and confidentiality
- Simple integration and archiving of documents from mainframe, Windows, Linux, Unix or SAP systems
- Maximize efficiency through document-related workflows for multiple users
- Simple handling of documents

The software also enables the flexible preparation and provision of data from various document sources for mass printing.

- **Cost Savings in Transactional Mass Printing**
Beta DocX enhances your printing efficiency by either replacing or supporting your existing mainframe output solutions, offering compatibility with longstanding document and print formats on Linux and Unix systems.
- **Deploy Mainframe Archives Without Mainframe Costs**
Many mainframe customers are adopting Beta UX products within their cost optimization strategies, e. g. to save MIPS, or as part of migrations to deploy archive data without the financial burden of a mainframe.
- **Save Mainframe Expenses**
Use Beta DocZ or other IBM Z mainframe products together with Beta DocX to significantly reduce computational expenses on your mainframe, transferring tasks to more economical Linux or Unix systems.
- **Seamless SAP Integration**
Effortlessly integrate and manage your SAP system data within your central output management using Beta DocX, or enable company-wide access to SAP data via the web, leading to substantial savings on SAP licensing fees.

Key Features

One solution for document and print data management: Our system includes all the features you will need to realize the management, storage and provision of document data.

Central Document Management

Efficiently manage document data across the organization. Reliably read, process, distribute and store your documents regardless of their origin, format, size or destination.

Audit-Proof Document Archiving

Archive large volumes of documents company-wide in a secure and legally compliant manner, including automatic deletion when the archiving period is over.

Access Controls

Specify user permissions for reading or commenting on data, documents and specific document sections, ensuring high-level security and confidentiality.

Automatic Forwarding

Sequential processing of a document by different users according to business processes enhances your workflow efficiency.

Easy Document Handling

Enable departments to swiftly and securely access, search and annotate documents and extensive lists from any source. Our system supports audit-proof archiving while allowing document commenting – all accessible through user-friendly web-based interfaces.

Central Output Management

Effortlessly convert, bundle, index and archive even the largest documents. Use and integrate document sources from mainframe systems, Windows/ Linux/ Unix or SAP systems.

Interfaces for Integration

Leverage Beta DocX with web services or the Beta UX API command interface to integrate your own applications, enhancing functionality and user experience.
