LDMSZ

Large Document Management System for Managing, Archiving and Providing Large Volumes of Documents

LDMSZ – Large Document Management System

LDMSZ is an integrated solution for output management, electronic records, and data archiving, designed to efficiently handle, archive, and provide access to large volumes of documents.

This comprehensive software enables the management, storage, and provision of bulk document data on the mainframe, supporting integration with distributed source systems and specialized mainframe document formats like AFP and AFPDS.

” Our customers are presently using approx. 65,000 clients managing an archive volume of over 350 TB – that’s clear proof of their satisfaction

Thomas Bauer

Systemengineer IT-Operations Content and Document Management, FIDUCIA & GAD IT AG

The Main Benefits

- Reliable handling of company documents
- Secure archiving of documents with automatic deletion
- Search, retrieve and comment on documents easily
- Easy access to functions via the Internet or z/OS ISPF interface
- Integration of SAP data and reduction of license fees
- Efficient use of CICS and IMS including cost reduction

With LDMSZ, you can centrally archive documents in compliance with audit requirements and provide online access cost-effectively.

- **Central Long-Term Archive**
High-performance, cost-efficient solution for audit-compliant long-term document archiving – including SAP.
- **Electronic Records**
Creation of individual eFiles for your company with the Beta Business Client and LDMSZ.
- **Mainframe Output Management**
Postage optimization, ePost as well as separation and indexing for fast IT production
- **Costs at a Glance**
Support of zIIP processors, print cost optimization and calculation as well as bit-accurate accounting

Key Features

Powerful Output Management and Archiving Solution

With LDMSZ you can easily collect terabytes worth of data from your various programs and archive these reliably and in an automated manner.

The data is transferred to the archive directly from the PC or via an SAP interface for storage or further processing. Empower thousands of users to rapidly access your document pool – if required, multi-user concurrent document access is also possible.

SAP Archiving

All functions are provided seamlessly and company-wide via a user-friendly, web-based interface. Users who are familiar with the z/OS environment can use the platform via the ISPF interface, which simplifies handling for this user group. Thanks to the wide range of access options, whether via the Internet or via the z/OS ISPF interface, the data management solution adapts to the different needs and preferences of employees. This leads to significantly higher user acceptance and productivity.

Reliable Reading, Processing, Distribution and Storing of Corporate Documents

Convert, bundle, index and archive large volumes of documents: LDMSZ covers all document-related processes - from document capture, e.g. from ERP transactions, to cross-channel provision and legally compliant archiving.

The solution enables efficient management of mass print streams, handles long-term archiving and facilitates the processing and searching of any electronic documents. You can access document sources from mainframe, Windows/Linux/Unix or SAP systems by integrating them.

Electronic Records

Provide specialist departments with precisely controlled, yet simple and quick access to any type of document or extensive lists from any source system. Use the Windows-based interface (Beta Business Client) to implement convenient and simple access to your archives or set up workflows that draw on electronic records. Integrated interfaces provide you with access to a wide range of data archives such as, for example, LDMSZ, Beta UX or third-party systems.

Beta Business Client

Optional modules add specialized functions, such as scanning documents, archiving mails from Notes, viewing AFP files or updating PDF/image documents.
